# **2011 EU-SILC MODULE ON INTERGENERATIONAL TRANSMISSION OF DISADVANTAGES**

Assessment of the implementation

## **0. Introduction**

The objective of this report is to present an overall analysis of the micro data concerning the 2011 Module on intergenerational transmission of disadvantages. The Commission Regulation 481/2010 presents the list of target secondary variables relating to intergenerational transmission of disadvantages.

After a brief introduction in section 1 on the main features of the 2011 Module, section 2 focuses on the main definitions agreed to describe the variables, and section 3 introduces an analysis of the frequencies for each variable among countries. In section 4 the flags are analysed. Finally, the last section concludes this document.

## **1. Main characteristics**

### **1.1 Relevance**

In 2005 the SILC ad-hoc module related to the “intergenerational transmission of poverty” (Commission Regulation (EC) No 16/2004) was conducted. It was decided that in 2011 this module will be repeated to allow an analysis of the evolution of the results.

The extent to which inequalities persist across generations is considered to play a major role in explaining adult social exclusion. In particular, the parental educational background and or their socio-economic status could influence the poverty risk during adulthood.

### **1.2 List of secondary target variables**

The 2011 module includes twenty one variables. All of them should be asked at personal level. Ten variables relate to the family situation of the respondent, two describe education of the respondent’s parents, six relate to the economic activity of the respondent’s parents and three present financial situation of the respondent’s household. All of them refer to the period when respondent was around 14 years old. The variables are the following:

#### Family data

PT010: Presence of parents

PT020: Number of adults

PT030: Number of children

PT040: Number of persons in the household in work

PT050: Year of birth of the father

PT060: Country of birth of the father

PT070: Citizenship of the father

PT080: Year of birth of the mother

PT090: Country of birth of the mother

PT100: Citizenship of the mother

#### Educational data

PT110: Highest level of education attained by the father

PT120: Highest level of education attained by the mother

#### Occupational data

PT130: Activity status of the father

PT140: Managerial position of the father

PT150: Main occupation of the father

PT160: Activity status of the mother

PT170: Managerial position of the mother

PT180: Main occupations of the mother

#### Wealth data

PT190: Financial situation of the household

PT200: Ability to make ends meet

PT210: Tenancy status

### **1.3 Unit of analysis**

The information is provided for all current household members or if applicable for all selected respondents, aged 25-59 that is to say over 24 years and less than 60 years. The eligible persons are those with a year of birth comprised between 1951 and 1985, both years being included.

### **1.4 Mode of data collection**

The mode of data collection is personal interview with all current household members or, if applicable, with the household selected respondent, aged 25-59.

Owing to the characteristics of the information to be collected, only personal interviews (proxy interviews as an exception for persons temporarily away or incapacitated) or extracted information from registers are allowed.

### **1.5 Reference period**

All target variables relate to the period when the interviewee was around 14 years old.

## 2. Description of the definitions

This section describes the main definitions used for describing the variables in the 2011 Module.

### 2.1 General definitions

#### ➤ **Father**

The person the interviewee considered to be his/her father, when he/she was around 14 years old. In general the father will be the biological father, but if the interviewee considers someone else to be the father, during the reference period, the answers should be about him, even if the biological father is alive and known.

#### ➤ **Mother**

The person the interviewee considered to be his/her mother, when he/she was around 14 years old. In general the mother will be the biological mother, but if the interviewee considers someone else to be the mother, during the reference period, the answers should be about her, even if the biological mother is alive and known.

#### ➤ **Household**

It refers to the household in which the respondent was living when he/she was around 14 years old. In case the parents of the respondent were divorced and shared the custody (50% of the time each parent), the respondent should select his/her household either on an objective basis taking into account his/her main address when he/she was around 14 years old, i.e. the one in the population register and/or in his/her identity card/passport, or on a subjective basis deciding where he/she felt more at home when he/she was around 14 years old. For the detailed guidelines please refer to the "Description of target variables: Cross-sectional and Longitudinal" (EU-SILC 065 – 2010 operation) - Units.

### 2.2 Presence of parents

#### ➤ **Lived with both parents**

The respondent lived with two adults both considered by the respondent as his/her parents. These adults can be the biological parents, step-parents, adoptive parents or any other adult regarded as parent.

#### ➤ **Lived with only father (or person considered as the father)**

The respondent lived with only his father (or person considered as the father), which does not imply that the father lived without a partner/new wife. The mother could be living somewhere else because the parents were divorced. The mother could also be dead at the time of the reference period, or could be unknown.

#### ➤ **Lived with only mother (or person considered as the mother)**

The respondent lived with only his mother (or person considered as the mother), which does not imply that the mother lived without a partner/new husband. The father could be living somewhere else because the parents were divorced. The father could also be dead at the time of the reference period, or could be unknown.

➤ **Lived in a private household without any parent**

The respondent lived in another private household or foster-home. None of the adults in the household were considered to be a parent. For example, the respondent was living with relatives or foster parents that he/she did not consider as parents. One or both parent could be living in another dwelling or could be dead.

➤ **Lived in a collective household or institution**

The respondent lived in a collective household or institution without adults regarded as parents.

### **2.3 Country of birth**

Country of birth is defined as the country of residence of the person's parent at the time of birth. Country of birth shall refer to the current (at the time of survey) national boundaries and not to the boundaries in the place when that person was born.

To apply this definition, information only on the country of birth may be insufficient. More detailed information on the locality is needed if the boundaries of the country have been changed. When data are collected by interview, additional questions can be asked to the respondent. When data are derived from administrative registers, it is more difficult to ensure that the recommendation is followed. If detailed information on place of birth exists in the register, country of birth should be re-coded so that place of birth is counted according to the current national borders. In the case of countries that no longer exist, the present-day borders of the country should be used.

An important exception to this rule concerns people born in a place which is now outside the national territory but who feel that they have always been a national citizen, the country of birth should be recorded as according to this citizenship<sup>1</sup>.

### **2.4 Citizenship**

Citizenship means the particular legal bond between an individual and his or her state, acquired by birth or naturalisation, whether by declaration, choice, marriage or other means according to national legislation. It generally corresponds to the country issuing the passport. For persons with multiple citizenships and one of the citizenship is the one of the country of residence, that citizenship should be coded.

Citizenship shall refer to the current (at the time of survey) national boundaries and not the boundaries at the time of the reference period. To apply this definition, information only on the citizenship may be insufficient. More detailed information on the current country is needed if the boundaries of the country have been changed. In the case of citizenships that no longer exist, the present-day borders of the country should be used<sup>2</sup>.

---

<sup>1</sup> For instance, concerning Finnish citizens born in former Finnish territories before the end of the 2<sup>nd</sup> World War, which currently belong to Russia, the country of birth should be recorded as Finland.

<sup>2</sup> As for citizenships which do not longer exist, the following conventions should be used if and only if there is not another piece of information which could contradict it:

- As for former-Czechoslovakia, the persons should be coded as '1' or '2' depending on the survey country;
- As for the former Soviet Union and former-Yugoslavia the persons should be coded as '3'.

For instance, if the respondent's father has always lived in Estonia or Slovenia and/or considered himself as Estonian or Slovenian, the citizenship should be coded as '1' or '2'. In the absence of such additional information, it should be 'coded' as '3' given that the probability of originating from a currently non-EU country was much higher.

## **2.5 Highest level of education attained**

Level is recorded according to the International Standard Classification of Education 1997 (ISCED-97) and consists of only levels without destination or orientation. "Low level" of education corresponds to levels 0, 1, and 2 of ISCED-97 (except the persons who are illiterate). "Medium level" and "High level" of education correspond respectively to levels 3 and 4, and 5 and 6 of ISCED-97. For the detailed guidelines please refer to the "Description of target variables: Cross-sectional and Longitudinal" (EU-SILC 065 – 2010 operation) - Variable PE020.

The person should be coded as "0" if he/she could neither read nor write in any language even if he/she attended some formal education. In the case he/she had never been in education but could read and/or write in any language (i.e. in particular not only the survey language(s)) it should not be coded as value "0".

## **2.6 Making ends meet**

As making ends meet does not exist in some languages, it is to be defined as paying usual necessary expenses and should be included both in the national questionnaires and in the guidelines for interviewers.

The usual necessary expenses of the household should include housing related costs but exclude business and farm work costs.

## **2.7 Tenancy status**

### **➤ Owner**

The owner of the accommodation should be a member of the household. If for instance the accommodation was provided by a relative (such as by the grandparents of the respondent) who was not a member of the household, then it should be recorded as either "tenant" or "accommodation was provided free", depending on whether or not a rent was paid by this household. A person is owner if he possesses a title deed independently if the house is fully paid or not. Households who paid partly rent and partly mortgage for their accommodation should be classified as 'owners' if they possessed a title deed.

### **➤ Tenant**

The tenant should be a member of the household. It includes tenant or subtenant paying rent at prevailing or market rate or at a reduced rate.

### **➤ Accommodation was provided free**

"Accommodation was provided free" applies only when there was no rent to be paid, such as when the accommodation came with the job, or was provided rent-free from a private source (for instance a relative).

### 3. Analysis of the variables

In this section an analysis of the frequencies of the answers variable by variable is included. For getting the complete description of the variables please read the guidelines:

[2011 SILC module guidelines](#)

#### Answer “Don’t know”

It should be noted that this answer category was not used in Denmark and in the United Kingdom. In case of Poland the answer “Don’t know” was included in the questionnaire and recoded as missing value afterwards.

#### PT010: Presence of parents

Values	
1	Lived with both parents (or persons considered as parents)
2	Lived with father only (or person considered as a father)
3	Lived with mother only (or person considered as a mother)
4	Lived in a private household without any parent
5	Lived in a collective household or institution
Flags	
1	filled
-1	missing
-5	not “selected respondent”
-6	not in age range (25-59)

This variable refers to the presence of one/both parents in respondent's household when he/she was around 14 years old.

#### Main results:

Majority of the respondents in all countries lived with both parents (or persons considered as parents). The values ranged from 75.8% in Estonia to 93.1% in Greece.

As regards the share of population living with father only (or person considered as a father) the values did not exceed 3% in all countries except Sweden, Hungary and Ireland (3.5%, 4.2% and 8.6% respectively).

Share of the population living with mother only (or person considered as a mother) was the highest in Estonia and Latvia (20.6% and 20.5% respectively). The lowest values for this category were reported in Greece, Malta (both 3.9%) and Ireland (1.9%).

It should be noted that in case of Ireland it is likely that the modalities 2 – “Lived with father only” and 3 – “Lived with mother only” were reversed, thus values for modalities 2 and 3 are not correct.

The category “Lived in a private household without any parents” was chosen by less than 2% of the population in 27 countries. The highest values were reported in Spain and Portugal (3.0% and 3.4% respectively).

Living in a collective household or institution was the least common answer.

## PT020: Number of adults

### Values

Number (2 digits) 0-99

### Flags

1	filled
-1	missing
-4	N/A (lived in a collective household or institution)
-5	not "selected respondent"
-6	not in age range (25-59)

This variable refers to the presence in respondent's household of adults (aged 18+) when he/she was around 14 years old. The parents are also counted (if any living in the dwelling).

### Main results:

The average number of adults in the household did not differ across countries with the smallest value in Latvia and Norway (both 2) and the highest in Malta (3).

It should be noted that the value for Ireland is not presented due to the problems in micro-data.

## PT030: Number of children

### Values

Number (2 digits) 0-99

### Flags

1	filled
-1	missing
-4	N/A (lived in a collective household or institution)
-5	not "selected respondent"
-6	not in age range (25-59)

This variable refers to the presence in respondent's household of children (below 18 years old) when he/she was around 14 years old. The respondent should also be counted.

### Main results:

The average number of children in the household ranged from 1.7 in France to 3.2 in the Netherlands.

It should be noted that the value for Ireland is not presented due to the problems in micro-data.

## PT040: Number of persons in the household in work

Values	
Number (2 digits) 0-99	
Flags	
1	filled
-1	missing
-4	N/A (lived in a collective household or institution)
-5	not "selected respondent"
-6	not in age range (25-59)

This variable refers to the number of persons who both were living in the respondent's household when he/she was around 14 years old and who were working. This variable includes the parents, the other adults, the other children and the respondent him/herself. Work should include any "regular" paid activities or activities performed as family worker during the reference period.

### Main results:

The average number of persons in the household in work was quite stable across countries with the values from 1.4 in Croatia to 2.3 in Denmark.

It should be noted that the value for Ireland is not presented due to the problems in micro-data.

## PT050: Year of birth of the father

Values	
Year (4 digits)	
-1	Don't know
Flags	
1	filled
-1	missing
-4	N/A (unknown father)
-5	not "selected respondent"
-6	not in age range (25-59)

This variable refers to the year the respondent's father (or the person he/she considered to be his/her father) was born.

This variable recorded only the year of birth of the respondent's father therefore no analysis is provided.

## PT060: Country of birth of the father

Values	
1	Born in the respondent's present country of residence (i.e. country of the survey)
2	Born in another EU-27 country
3	Born in another European country
4	Born outside Europe
-1	Don't know

  

Flags	
1	filled
-1	missing
-4	N/A (unknown father)
-5	not "selected respondent"
-6	not in age range (25-59)

Country of birth of the father (or the person he/she considered to be his/her father) is defined as the country of residence of the father's mother at the time of birth. Country of birth shall refer to the current (at the time of survey) national boundaries and not to the boundaries in the place when that person was born.

### Main results:

The most frequent answer in all countries except Luxembourg was "Born in the respondent's present country of residence". In nineteen countries values exceeded 80% while in Luxembourg only 39.0% of respondents chose this answer.

The category "Born in another EU-27 country" was the most popular in Luxembourg (48.3%) and the least popular in Romania (0.2%).

In Latvia and Estonia more than 25% of respondents (26.2% and 27.1% respectively) declared that their father was born in another (other than EU-27) European country.

The answer category "Born outside Europe" exceeded 5% in ten countries with the highest value in France and the United Kingdom (12.1% and 12.2% respectively).

The values of the answer "Don't know" were not very high and did not exceed 4%.

## PT070: Citizenship of the father

Values	
1	The respondent's present country of residence (i.e. country of the survey)
2	Another EU-27 country
3	Another European country
4	Outside Europe
-1	Don't know

  

Flags	
1	filled
-1	missing
-4	N/A (unknown father)
-5	not "selected respondent"
-6	not in age range (25-59)

The citizenship that the respondent's father (or the person he/she considered to be his/her father) had at the reference period (i.e. when the interviewee was about 14). Citizenship means the particular legal bond between an individual and his or her state, acquired by birth or naturalisation, whether by declaration, choice, marriage or other means according to national legislation. It generally corresponds to the country issuing the passport. For persons with multiple citizenships and one of the citizenship is the one of the country of residence, that citizenship should be coded.

### Main results:

The category "The respondent's present country of residence" chosen by more than 80% of the population in 25 countries was the most frequent answer with the exception of Luxembourg.

As for the answer "Another EU-27 country" it was the most popular in Luxembourg with the value of 48.1%. In other countries values ranged from 0.1% in Romania to 10.6% in Germany. The rate was also high in Switzerland where 27.8% of the respondents declared their father had a citizenship of the EU-27 country.

For the category "Another (other than EU-27) European country" the highest values were reported in Latvia and Estonia (18.8% and 23.3% respectively) while the lowest in Romania – 0.1%.

More than 5% of the respondents in nine countries declared their father had citizenship of the country outside Europe. The highest value was reported in Ireland – 13.3%.

The values of the answer "Don't know" were not very high and did not exceed 5%.

## PT080: Year of birth of the mother

Values	
Year (4 digits)	
-1	Don't know

  

Flags	
1	filled
-1	missing
-4	N/A (unknown mother)
-5	not "selected respondent"
-6	not in age range (25-59)

The year the respondent's mother (or the person he/she considered to be his/her mother) was born.

This variable recorded only the year of birth of the respondent's mother therefore no analysis is provided.

## PT090: Country of birth of the mother

Values	
1	Born in the respondent's present country of residence (i.e. country of the survey)
2	Born in another EU-27 country
3	Born in another European country
4	Born outside Europe
-1	Don't know

  

Flags	
1	filled
-1	missing
-4	N/A (unknown mother)
-5	not "selected respondent"
-6	not in age range (25-59)

Country of birth of the mother (or the person he/she considered to be his/her father) is defined as the country of residence of the mother's mother at the time of birth. Country of birth shall refer to the current (at the time of survey) national boundaries and not the boundaries in the place when that person was born.

### Main results:

The category "Born in the respondent's country of residence" was the most frequent answer in all countries except Luxembourg. In 23 countries values exceeded 80% with the highest value in Romania – 99.8%. The lowest value was reported in Luxembourg – 37.5%.

As for the category "Born in another EU-country" the values ranged from less than 1% in eight countries to more than 10% in five countries with the highest value in Luxembourg – 49.7%.

In Latvia and Estonia more than 20% of respondents (24.1% and 27.9% respectively) declared that their mother was born in another (other than EU-27) European country.

More than 10% of the respondents in the Netherlands, the United Kingdom (both 10.5%) and France (11.5%) had mothers born outside Europe. This category is empty for the United Kingdom due to the error in the calculation.

The values of the answer “Don’t know” were not very high and did not exceed 4%.

**PT100: Citizenship of the mother**

Values	
1	The respondent's present country of residence (i.e. country of the survey)
2	Another EU-27 country
3	Another European country
4	Outside Europe
-1	Don't know
Flags	
1	filled
-1	missing
-4	N/A (unknown mother)
-5	not “selected respondent”
-6	not in age range (25-59)

The citizenship the respondent's mother (or the person he/she considered to be the mother) had at the reference period (i.e. when the interviewee was about 14). Citizenship means the particular legal bond between an individual and his or her state, acquired by birth or naturalisation, whether by declaration, choice, marriage or other means according to national legislation. It generally corresponds to the country issuing the passport. For persons with multiple citizenships and one of the citizenship is the one of the country of residence, that citizenship should be coded.

Main results:

The most frequent answer in all countries except Luxembourg was “The respondent’s present country of residence” with the values exceeding 80% in 26 countries.

The category “Another EU-27 country” was not very frequent in all countries except Luxembourg with the value of 49.0%. The value was also high in Switzerland where 28.3% of the respondents declared their mother had a citizenship of the EU-27 country.

As for the category “Another (other than EU-27) European country” it was the most popular in Latvia and Estonia with the values of 16.9% and 22.2%.

The values of the category “Outside Europe” did not exceed 10% with the exception of Ireland (12.4%).

The values of the answer “Don’t know” were not very high and did not exceed 4%.

## PT110: Highest level of education attained by the father

Values	
0	Father could neither read nor write in any language
1	Low level (pre-primary, primary education or lower secondary education)
2	Medium level (upper secondary education and post-secondary non-tertiary education)
3	High level (first stage of tertiary education and second stage of tertiary education)
-1	Don't know

  

Flags	
1	filled
-1	missing
-4	N/A (unknown father)
-5	not "selected respondent"
-6	not in age range (25-59)

The highest education the father (or person considered as a father) had attained before or during the period when the respondent was around 14 years old.

### Main results:

The category "Father could neither read nor write in any language" was not used by two countries (DK, SE<sup>3</sup>). The values ranged from less than 1% in twelve countries to more than 15% in Malta (15.2%) and Portugal (17.7%).

In sixteen countries more than half of the respondents selected the answer "Low level (pre-primary, primary education or lower secondary education)" with the peak of more than 75% in Romania, Spain and Italy.

Regarding the category "Medium level (upper secondary education and post-secondary non-tertiary education)" the values differed across countries starting from 3.7% in Portugal to 54.5% in Slovakia.

The category "High level (first stage of tertiary education and second stage of tertiary education)" gathered from 3.4% respondents in Portugal to 29.3% in Norway.

As for the answer "Don't know" in twelve countries more than 5% of the respondents selected this category with the highest values in Greece (13.5%), Croatia (14.1%) and Germany (16.1%).

---

<sup>3</sup> Explanation: PT110 is the variable used in the Swedish Living Conditions Survey. This variable doesn't include the category "could neither read nor write" and accordingly it was not possible to use category "0" in the EU-SILC dataset

## PT120: Highest level of education attained by the mother

Values	
0	Mother could neither read nor write in any language
1	Low level (pre-primary, primary or lower secondary education)
2	Medium level (upper secondary education and post-secondary non-tertiary education)
3	High level (first stage of tertiary education and second stage of tertiary education)
-1	Don't know
Flags	
1	filled
-1	missing
-4	N/A (unknown mother)
-5	not "selected respondent"
-6	not in age range (25-59)

The highest education the mother (or person considered as a mother) had attained before or during the period when the respondent was 14 years old.

### Main results:

The category "Mother could neither read nor write in any language" was not used by two countries (DK, SE<sup>4</sup>). The values ranged from less than 1% in eight countries to more than 25% in Portugal (25.8%).

The most popular answer in the majority of countries was "Low level (pre-primary, primary education or lower secondary education)". The lowest values were reported in Germany – 27.0% while the highest in Romania (75.2%), Italy (79.9%) and Spain (80.1%).

In seven countries the category "Medium level (upper secondary education and post-secondary non-tertiary education)" reached the highest values with the peak in Slovakia - 51.7%. On the other hand the values lower than 10% were observed in Portugal, Spain and France.

As for the category "High level (first stage of tertiary education and second stage of tertiary education)" the values ranged from 2.4% in Romania to more than 20% in Denmark, Norway, Sweden and Estonia.

Regarding the answer "Don't know", in eight countries more than 5% of the respondents selected this category with the values higher than 10% in Croatia, Greece and Germany.

---

<sup>4</sup> Explanation: PT120 is the variable used in the Swedish Living Conditions Survey. This variable doesn't include the category "could neither read nor write" and accordingly it was not possible to use category "0" in the EU-SILC dataset

## PT130: Activity status of the father

Values	
1	Employed
2	Self-employed (including family worker)
3	Unemployed
4	In retirement or in early retirement or had given up business
5	Fulfilling domestic tasks and care responsibilities
6	Other inactive person
-1	Don't know

  

Flags	
1	filled
-1	missing
-3	N/A (father dead)
-4	N/A (unknown father)
-5	not "selected respondent"
-6	not in age range (25-59)

For the detailed guidelines please refer to the "Description of target variables: Cross-sectional and Longitudinal" (EU-SILC 065 – 2010 operation) - Variable PL031. "Pupil, student, further training, unpaid work experience", "Permanently disabled or/and unfit to work" or "In compulsory military community or service" should be included in "Other inactive person" (value 6).

### Main results:

The most common answer in all countries except Greece was "Employed" with the values reaching 95% or more in Estonia, Slovakia and the Czech Republic.

"Self-employed" was the second most frequent answer (with the exception of Greece where this answer was the most popular). The lowest values were observed in Latvia (0.8%) while the highest in Greece (49.9%).

As for the categories "Unemployed", "In retirement or in early retirement or had given up business", "Fulfilling domestic tasks and care responsibilities" and "Other inactive person" the values didn't differentiate very much with rates not exceeding 4%. The only exception was Ireland with the value of 5.1% for "Unemployed". Moreover in Cyprus, Greece and Iceland nobody selected the answer "Fulfilling domestic tasks and care responsibilities". The same situation appeared in Norway in case of the answer "Other inactive person".

In four countries - Germany, Croatia, Lithuania and Romania - more than 5% of the respondents selected the answer "Don't know".

## PT140: Managerial position of the father

Values	
1	Supervisory
2	Non-supervisory
-1	Don't know

  

Flags	
1	filled
-1	missing
-2	N/A (father not working)
-3	N/A (father dead)
-4	N/A (unknown father)
-5	not "selected respondent"
-6	not in age range (25-59)

Supervisory responsibility includes formal responsibility for supervising a group of other employees (other than apprentices), whom they supervise directly, sometimes doing some of the work they supervise. It implies that the supervisor or foreman takes charge of the work, directs the work and sees that it is properly done.

### Main results:

As for the answer "Supervisory" the highest values exceeding 40% were observed in Switzerland, the United Kingdom, Denmark, Iceland and Finland and lowest (less than 10%) in Bulgaria, Latvia and Romania.

Regarding the category "Non-supervisory" the values higher than 80% were reported in Latvia, Bulgaria, Slovakia, Hungary and Poland, while the lowest in Iceland (39.1%).

In ten countries more than 5% of the respondents selected the category "Don't know" with the values higher than 10% in Germany, Croatia and Greece. In Finland this variable was not collected and all respondents were given the answer "Don't know".

## PT150: Main occupation of the father

Values	
ISCO-08(COM) code (1 digit)	
-1	Don't know

  

Flags	
1	filled
-1	missing
-2	N/A (father not working)
-3	N/A (father dead)
-4	N/A (unknown father)
-5	not "selected respondent"
-6	not in age range (25-59)

The main occupation should be coded according to the ISCO-08 (COM) classification (International Standard Classification of Occupations, published by the International Labour Office). For the detailed guidelines please refer to:

<http://www.ilo.org/public/english/bureau/stat/isco/draftpdf.htm>

**Main results:**

The category “Armed forces” was reported in twenty seven countries. The values did not differ across countries ranging from 0.1% in Iceland to 2.8% in Malta.

As for the “Legislators, senior officials and managers” this category gathered from 0.6% in Romania to 12.4% in Norway.

Regarding the answer “Professionals”, recorded values ranged from 3.8% in Portugal to 15.6% in Sweden and the United Kingdom.

“Technicians and associate professionals” gathered from 3% in Greece to 17.4% in Norway.

The answer “Clerks” was not very frequent and did not exceed 10% in any of the countries. The lowest values were observed in Latvia – 1.1%, while the highest in Belgium – 9.7%.

The values for the category “Service workers and shop and market sales workers” ranged from 1.9% in Romania to 14.8% in Austria.

As for the “Skilled agricultural and fishery workers” the values differed significantly across countries with the lowest values observed in Slovakia – 2.9% and the highest in Greece – 28.5%.

Regarding the answer “Craft and related trades workers” it ranged from 12.7% in Finland to 33.6% in the Czech Republic.

“Plant and machine operators and assemblers” gathered from 5.9% in France to 28.3% in Estonia.

The values for “Elementary occupations” differed also across countries with the lowest values in Denmark – 1% and the highest in Croatia – 26.8%.

As for the answer “Don’t know”, in nine countries more than 5% of the respondents selected this category. The highest values were reported in Romania – 22.6% and Finland – 36.9%.

**PT160: Activity status of the mother**

Values	
1	Employed
2	Self-employed (including family worker)
3	Unemployed
4	In retirement or in early retirement or had given up business
5	Fulfilling domestic tasks and care responsibilities
6	Other inactive person
-1	Don't know
Flags	
1	filled
-1	missing
-3	N/A (mother dead)
-4	N/A (unknown mother)
-5	not “selected respondent”
-6	not in age range (25-59)

For the detailed guidelines please refer to the "Description of target variables: Cross-sectional and Longitudinal" (EU-SILC 065 – 2010 operation) - Variable PL031. “Pupil, student, further training, unpaid work experience”, “Permanently disabled or/and unfit to work” or “In compulsory military community or service” should be included in “Other inactive person” (value 6).

Main results:

In nineteen countries the most popular answer was “Employed” with the figures ranging from 8.3% in Malta to more than 90% in the Czech Republic and Estonia (90.6% and 92.6% respectively).

“Fulfilling domestic tasks and care responsibilities” was the second most frequent category with the lowest values around 5% in Estonia, Bulgaria and Finland and the highest values in Spain – 71.3% and Malta – 88.4%.

The category “Self-employed” was selected by less than 1% in Slovakia, Estonia and Latvia and on the other extreme by slightly more than 20% in Romania, Poland and Greece.

Regarding the categories “Unemployed”, “In retirement or in early retirement or had given up business” and “Other inactive person” the values didn’t differentiate very much with rates not exceeding 4%. The only exception was the United Kingdom with the value of 8.4% for the category “Unemployed”. Moreover in Iceland nobody selected the answer “In retirement or in early retirement or had given up business”.

As for the answer “Don’t know”, in two countries - Croatia and Romania – slightly more than 5% of the respondents selected this category.

**PT170: Managerial position of the mother**

Values	
1	Supervisory
2	Non-supervisory
-1	Don't know
Flags	
1	filled
-1	missing
-2	N/A (mother not working)
-3	N/A (mother dead)
-4	N/A (unknown mother)
-5	not “selected respondent”
-6	not in age range (25-59)

Supervisory responsibility includes formal responsibility for supervising a group of other employees (other than apprentices), whom they supervise directly, sometimes doing some of the work they supervise. It implies that the supervisor or foreman takes charge of the work, directs the work and sees that it is properly done.

Main results:

In all countries more than half of the respondents selected the answer “Non-supervisory” with the values higher than 90% in six countries.

As for the category “Supervisory” the lowest values were reported in Romania – 1.7%, while the highest in Ireland – 26.6%.

In nine countries more than 5% of the respondents selected the category “Don’t know” with the values higher than 10% in Croatia, Malta and Romania. In Finland this variable was not collected and all respondents were given the answer “Don’t know”.

## **PT180: Main occupation of the mother**

Values	
ISCO-08(COM) code (1 digit)	
-1	Don't know
Flags	
1	filled
-1	missing
-2	N/A (mother not working)
-3	N/A (mother dead)
-4	N/A (unknown mother)
-5	not “selected respondent”
-6	not in age range (25-59)

The main occupation should be coded according to the ISCO-08 (COM) classification (International Standard Classification of Occupations, published by the International Labour Office). For the detailed guidelines please refer to:

<http://www.ilo.org/public/english/bureau/stat/isco/draftpdf.htm>

### Main results:

As for the answer “Armed forces” nobody selected this answer in twelve countries. In other countries the value exceeded slightly 1% only in Romania (1.4%).

Regarding the answer “Legislators, senior officials and managers”, recorded values ranged from 0.2% in Cyprus to 7.6% in Ireland.

The category “Professionals” gathered from 4.8% of the answers in Austria to 24.1% in Belgium.

The values for the category “Technicians and associate professionals” ranged from 1.3% in Greece to 20.2% in Norway.

Similarly to the previous category “Clerks” gathered from 4.2% in Romania to 20.7% in France.

As for the “Service workers and shop and market sales workers” the values ranged from 8.3% in Romania to 36.0% in Sweden.

The values for the category “Skilled agricultural and fishery workers” differed across countries starting from 0.4% in Belgium to 42.2% in Greece.

The answer “Craft and related trades workers” was not very frequent with the values slightly exceeding 10% in six countries (the highest value recorded in Romania – 11.8%).

Regarding the category “Plant and machine operators and assemblers” the values ranged from less than 1% in Slovenia and France to 14.2% in Germany.

As for the “Elementary occupations” the differences across countries were quite significant with the values ranging from 0.1% in Denmark to 41.9% in Cyprus.

Regarding the answer “Don’t know”, in six countries more than 5% of the respondents selected this category. The highest values were reported in Malta – 16.5% and Romania – 19.3%.

## **PT190: Financial situation of the household**

Values	
1	Very bad
2	Bad
3	Moderately bad
4	Moderately good
5	Good
6	Very good
-1	Don't know
Flags	
1	filled
-1	missing
-4	N/A (lived in a collective household or institution)
-5	not “selected respondent”
-6	not in age range (25-59)

The objective of this variable is to assess the respondent's feeling about the financial situation of the household in which the respondent was living when he/she was around 14 years old.

### Main results:

The category “Moderately good” was the most frequent in twenty four countries with the values ranging from 27.5% in Sweden to 50.1% in Estonia.

In seven countries the answer “Good” was chosen more often than the answer “Moderately good”. The answer “Good” was most frequent in the Netherlands with the value of 46.5% and the least frequent in Romania – 12.2%.

As for the category “Bad” the values ranged from 4.3% in Norway to 16.9% in Portugal.

Regarding the answer “Moderately bad” 33.1% of respondents selected it in Slovenia while only 8.1% in Denmark.

The least frequent were two answers: “Very bad” and “Very good” with the values not exceeding 15%.

The values of the answer "Don't know" were not very high and did not exceed 5% except Romania where around 6% of the population selected this answer.

## PT200: Ability to make ends meet

Values	
1	With great difficulty
2	With difficulty
3	With some difficulty
4	Fairly easily
5	Easily
6	Very easily
-1	Don't know

  

Flags	
1	filled
-1	missing
-4	N/A (lived in a collective household or institution)
-5	not "selected respondent"
-6	not in age range (25-59)

The objective of this variable is to assess the respondent feeling about the level of difficulty experienced by the household in which the respondent was living when he/she was around 14 years old in making ends meet. For detailed guidelines please refer to the "Description of target variables: Cross-sectional and Longitudinal" (EU-SILC 065 – 2010 operation) - Variable HS120.

### Main results:

In nineteen countries the most frequent answer was "Fairly easily" with the values ranging from 15.8% in Croatia to 46.3% in Belgium.

The answers "With some difficulty" and "Easily" were also quite frequent with the values between 12.6% in the Netherlands and 40.3% in Hungary for the former one and between 6.8% in Romania and 47.6% in the Netherlands for the later one.

The values for the category "With difficulty" exceeded 15% in seven countries with the highest value of 22.1% in Croatia.

The least popular were the extreme categories: "With great difficulty" and "Very easily".

As for the answer "Don't know" the values were not very high. The exceptions were Germany, Slovakia, Romania, Sweden and the Czech Republic with the values higher than 5% and in case of the Czech Republic even exceeding 10%.

## PT210: Tenancy status

Values	
1	Owner
2	Tenant
3	Accommodation was provided free
-1	Don't know

  

Flags	
1	filled
-1	missing
-4	N/A (lived in a collective household or institution)
-5	not "selected respondent"
-6	not in age range (25-59)

Household refers to the household in which the respondent was living when he/she was around 14 years old. For the detailed guidelines please refer to the "Description of target variables: Cross-sectional and Longitudinal" (EU-SILC 065 – 2010 operation) – Variable HH020.

### Main results:

In all countries majority of respondents lived in a dwelling that was owned by the household. In twelve countries more than 75% of the population selected the answer "Owner".

As regards the category "Tenant" in majority of cases its values exceeded those of the category "Accommodation was provided free" (the exceptions are: Bulgaria, Croatia, Cyprus and Lithuania).

The values for the category "Tenant" ranged from 3.7% in Bulgaria to 46.7% in Germany while for the category "Accommodation was provided free" they ranged from almost 0% in Finland to 24.0% in Latvia.

The values of the answer "Don't know" were not very high and did not exceed 5% except Romania where 5.6% of the population selected this answer.

## 4. Analysis of the flags

In this section the flag variables used in the 2011 Module are analysed. Several values were used in this module for flag variables: flag “1” (filled value), flag “-1” (missing value), flags “-2”, “-3” and “-4” (with different meanings of not applicable), flag “-5” (not selected respondent) and “-6” (not in age range). In order to carry out the analysis of the flags, we use data that can be found in Annex 2: “Frequencies of flags 1, -1, -2, -3, -4, -5 and -6” for each variable by country.

### 4.1 Flag -1 “Missing”

This section analyses the flag “-1” which is to be used when the variable is not filled. The results of this analysis allow determining which variables were more difficult to implement by countries.

In general missing values were not very frequent and in majority of countries did not exceed 5%. The exceptions were:

- Poland and Switzerland - missing values were around or above 5% in case of all variables
- The United Kingdom - missing values were around or above 8% in case of all variables
- The Czech Republic - missing values were higher than 10% in case of all variables
- Ireland - missing values were the highest reaching 15% or more in case of all variables.

#### Explanations:

*Poland* – high number of missing values is caused by non-response to individual questionnaire.

*Switzerland* – missing values are caused by: proxy interviews, unit non-response and partial non-response.

*The United Kingdom* - the high level of missingness for all variables is mainly because the relevant questions were not asked by proxy or imputed for people who did not provide interviews.

*The Czech Republic* – due to specific reference period and subjective matter of some questions it was not allowed to fill the questionnaire by proxy.

It should be noted that the answer category “Don’t know” was allowed for seventeen variables and using it could decrease the number of missing values.

There were also some particular variables that gathered more missing values in some countries:

- PT050: Year of birth of the father – 10.4% in Croatia
- PT150: Main occupation of the father – 21.1% in Sweden
- PT180: Main occupation of the mother: 10.1% in Belgium and 17.8% in Sweden

#### Explanations:

In Sweden high missing values in case of “Main occupation of the father/mother” were caused by the wrong routing between variables in the questionnaire.

<b>% of flag -1</b>	<b>Number of countries</b>	<b>Countries</b>

## 4.2 Flag “Not applicable”

### 4.2.1 Flag “-2”

Flag “-2” is used with different meanings:

- *Not applicable due to the fact that the respondent’s father was not working*

The variables concerned are: PT140 and PT150. It was used in all countries and the values ranged from less than 1% in eleven countries to more than 2% in five countries with the highest value observed in Croatia – 4.4%.

#### **!\ Inconsistencies**

Denmark: 0 cases (PT140), 47 cases (PT150)

In PT140 47 cases where respondent’s father was not working were wrongly classified.

France: 183 cases (PT140), 298 cases (PT150)

For 115 persons the variable PT140 is filled incorrectly, the flag should be '-2' as in the variable PT150.

Romania: 631 cases (PT140), 256 cases (PT150)

The difference between the number of cases with flag = -2 on the PT140 (managerial position of the father) and PT150 (main occupation of the father) variables is due to the fact that in PT140\_F=-2 (father not working) are also included cases when persons did not know the occupational status of the father (the assumption was that if the person did not know the occupational status of the father, the father was not working). These cases were not included in PT150\_F.

- *Not applicable due to the fact that the respondent’s mother was not working*

The variables concerned are: PT170 and PT180. It was used in all countries. The figures ranged a lot across countries with the values lower than 10% in twelve countries (the lowest value in Finland – 2.1%) and higher than 30% in four countries (the highest value in Malta – 47.4%).

### 4.2.2 Flag “-3”

Flag “-3” is used with different meanings:

- *Not applicable due to the fact that the respondent’s father was dead*

The variables concerned are: PT130, PT140 and PT150. This flag was not used in Denmark, Italy and Finland<sup>5</sup>. The values did not range a lot starting from 0.2% in the United Kingdom to 3.3% in Portugal.

---

<sup>5</sup> Explanation: Flag -3 (father/mother dead) was not used since this variable was not created. As the information was collected largely from Census files, it would have taken great effort to match death statistics into the data. That is why deaths and other reasons are pooled in cases of unknown parent(s) in flag -4.

### **/>\ Inconsistencies**

Hungary: 384 cases (PT130, PT150), 390 cases (PT140)

The cause of these problems may be that although the respondents did not know their father personally, in some cases they could answer the questions.

Sweden: 68 cases (PT130, PT140), 65 cases (PT150)

The flag -3 for PT150 most probably should have been 68 instead of 65.

- *Not applicable due to the fact that the respondent's mother was dead*

The variables concerned are: PT160, PT170 and PT180. This flag was not used in Denmark, Italy, and Finland<sup>5</sup>. The values are very small exceeding 1% only in Portugal (1.3%).

### **/>\ Inconsistencies**

Belgium: 42 cases (PT160, PT170), 0 cases (PT180)

In PT180 42 cases where respondent's mother was dead were wrongly classified as missing values (flag "-1").

Hungary: 129 cases (PT160, PT180), 133 cases (PT170)

The cause of these problems may be that although the respondents did not know their mother personally, in some cases they could answer the questions.

Sweden: 0 cases ((PT160, PT170 and PT180)

The flag -3 for PT160 most probably should have been 68 instead of 0.

### **4.2.3 Flag "-4"**

Flag "-4" is used with different meanings:

- *Not applicable due to the fact that the respondent lived in a collective household*

The variables concerned are: PT020, PT030, PT040, PT190, PT200 and PT210. It was correctly used in all countries. The values were very small exceeding 1% only in Bulgaria and Italy (1% and 1.5% respectively).

- *Not applicable due to the fact that the respondent's father was unknown*

The variables concerned are: PT050, PT060, PT070, PT110, PT130, PT140 and PT150. This flag was not used in Denmark, Germany, Iceland, Norway and Switzerland. The values ranged from less than 1% in fifteen countries to more than 5% in Italy (5.2%), Estonia (6.3%) and Latvia (9.4%).

### **/>\ Inconsistencies**

Bulgaria: 681 cases (PT050, PT060, PT070, PT110), 481 cases (PT130, PT140, PT150)

The reason for the difference in the values of flag -4 for the above mentioned variables is that when the person lived with only one of his/her parents we did not ask him questions for the other parent. In the case when one of the parents was dead at the time when the respondent was around 14 years the flag -3 is used for variables PT130, PT140, PT150. Consequently, the values of flag -4 in variables PT050, PT060, PT070 and PT110 contain both information on

unknown parent and dead parent because when the person lived with only father/mother the true questions for year of birth, country of birth, citizenship and highest level of education attained were not asked for the missing parent.

France: 126 cases (PT050, PT060, PT070, PT110), 116 cases (PT130, PT140, PT150)

For 10 persons, flags of PT050, PT060 PT070 and PT110 are inconsistent with the ones for PT130 PT140 and PT150. In these cases, the right flag is '-3' (father dead), this modality does not exist for the first variables. We coded wrongly '-4' (unknown father). We should flag these cases as missing value ('-1').

Hungary: 224 cases (PT050, PT060, PT070, PT150), 245 cases (PT110), 251 cases (PT130), 244 cases (PT140)

The cause of these problems may be that although the respondents did not know their father personally, in some cases they could answer the questions.

Sweden: 8 cases (PT050, PT060, PT070, PT130, PT140 and PT150), 6 cases (PT110)

The flag -4 for PT110 most probably should have been 8 instead of 6.

➤ *Not applicable due to the fact that the respondent's mother was unknown*

The variables concerned are: PT080, PT090, PT100, PT120, PT160, PT170 and PT180. This flag was not used in Denmark, Germany, Iceland, Norway and Switzerland. The values did not vary a lot across countries with the lowest figures in Sweden- around 0% and the highest in Romania- 3%.

#### **/>\ Inconsistencies**

Bulgaria: 311 cases (PT080, PT090, PT100, PT120), 252 cases (PT160, PT170, PT180)

The reason for the difference in the values of flag -4 for the above mentioned variables is that when the person lived with only one of his/her parents we did not ask him questions for the other parent. In the case when one of the parents was dead at the time when the respondent was around 14 years the flag -3 is used for variables PT160, PT170, PT180. Consequently, the values of flag -4 in variables PT080, PT090, PT100 and PT120 contain both information on unknown parent and dead parent because when the person lived with only father/mother the true questions for year of birth, country of birth, citizenship and highest level of education attained were not asked for the missing parent.

Greece: 0 cases (PT080, PT090, PT100, PT120), 3 cases (PT160, PT170, PT180)

France: 31 cases (PT080, PT090, PT100, PT120, PT170), 29 cases (PT160, PT180)

For 2 persons, flags of PT080, PT090, PT100 and PT120 are inconsistent with the ones for PT160, PT170 and PT180. In these cases, the right flag is '-3' (mother dead), this modality does not exist for the first variables. We coded wrongly '-4' (unknown mother). We should flag these cases as missing value ('-1').

Hungary: 73 cases (PT080, PT090, PT100, PT180), 80 cases (PT120), 79 cases (PT160), 78 cases (PT170)

The cause of these problems may be that although the respondents did not know their mother personally, in some cases they could answer the questions.

Sweden: 3 cases (PT080, PT090, PT100, PT120, PT170, PT180), 0 cases (PT160)

The flag -4 for PT160 most probably should have been 3 instead of 0.

#### **4.3 Flag -5 “Not selected respondent”**

The flag “-5” was used only by countries using the “selected respondent” model, namely: Denmark, the Netherlands, Slovenia, Finland, Sweden, Iceland and Norway.

#### **4.3 Flag -6 “Not in age range (25-59)”**

The flag “-6” was included in all module variables. It was used in all countries. The figures differed between “selected respondent” and “non-selected respondent” countries due to the fact that in the former countries information was collected from selected respondent only (aged 25-59), while in the latter ones from all household members (aged 25-59) . In case of “selected respondent” countries the values ranged from 15.7% in Slovenia to 23.4% in Sweden, while in the “non-selected respondent” countries the lowest figures were observed in Luxembourg – 35.2% and the highest in Belgium – 48.9%.

## **5. Conclusion**

The analysis of the frequencies for the variables of the Module presented in this document shows that on the one hand, there is a variability of answers across countries and on the other hand, some patterns appear when looking at the results.

It seems that this Module included some more difficult topics, for example questions related to the level of education of the father, managerial position of the parents or main occupation of the parents, that gathered more answers “Don’t know” than the others.

The analysis of the “Not applicable” flags showed that they were applied correctly in majority of the countries. Some inconsistencies between variables appeared in some countries when using the same flag (e.g. flag -3 “Not applicable due to the fact that the respondent’s father was dead”).

When analysing flag -5 “Not selected respondent” it appeared that it was correctly used in all countries.

About the flag -1 “Missing” in the majority of countries the values were rather low with some exceptions explained mainly by the individual non-response.

## 7. Annexes

**Annex 1: Frequencies of 'filled' values for each variable by country (weighted values)**
