# STS data requirements under the EBS Regulation

## Overview of the legal requirements from January/Q1 2024 onwards

### Overview of the legal requirements

- Transmitting unadjusted, calendar and seasonally adjusted indices
- Transmitting indices according to their periodicity (i.e. voluntary monthly indices should also be sent monthly and not each quarter three monthly indices)
- Keeping the base year 2021 for all indices until the general re-basing in 2028 to the base year 2025.
- In the data tables on requirements, the transmission deadlines are expressed in calendar days.
- Alphabetical codes (e.g. PROD, TOVT) as used in the processing environment are not subject of the legal basis.

### Change of weightings and base year

- **Annual update of weights** (in combination with chain-linking) is **recommended** (but no formal requirement) for STS price and volume indicators
- The current **legal requirement is otherwise that the weights are updated every five years** using as base years the years ending with a 0 or a 5; rebasing within three years after the end of the new base year. With EBS, the first base year was 2015, the current base year is 2021 and the third base year will be 2025. From thereon, every five years, Member States shall rebase the indices using as base years the years ending with a 0 or a 5 and again all indices must be rebased on the new base year within three years after the end of this new base year.
- Countries implementing chain-linking for STS indicators shall follow the target methodology elaborated by the STS Task Force on chain-linking.

### Thresholds for country grouping

- The variable used for the grouping of countries in size classes is the **gross value added**.
- **Two thresholds – set at 1% respectively at 4% –** are used to distinguish between small (S), medium (M) and large (L) countries.
- The **overall grouping** of the countries is done on the basis of their share in the EU gross value added of Sections B to N (excluding Section K)
- **Safeguard clause:** if a country's share in the EU value added in one of the following NACE Section, or defined aggregates corresponds to that of a lower size category (lower than the size category resulting from the overall grouping), the level of detail for that country shall correspond to those of the lower size category for the Section (or Sections) in question. This may apply to NACE Section C (Manufacturing), Section F (Construction), Section G (Wholesale and retail trade; repair of motor vehicles and motorcycles) and to the aggregate of Sections H to N excluding K, (Services).

<b>130201</b> Producer prices (PRON)	Level of detail	S,M	Aggregate of NACE Sections H+I+J+L+M (excl. M701, M72 and M75) +N, Sections and Divisions of NACE: H, I, J, L, M (excluding M701, M72 and, M75) and N.

Use of approximations and quality requirements:

- Number of employees and self-employed persons may be approximated by the number of employees.
- Indices based on actual producer prices are preferable. If those are not available, approximations may be used for H49, H50, H52, I55, I56, J58, J59, J60, L68, M74, N77, N79, N81 and N82. Products (CPA) may be used to approximate activities (NACE).
- The Service producer price indicators (SPPIs) are Business-to-All (B2All). Where the share of transactions with private consumers (B2C) is negligible, the SPPIs may be approximated by Business-to-business (B2B) indicators.
