

## Why get in touch?

- If you struggle with structuring, formatting, sharing or processing legislation AND you have no solution for this, don't reinvent the wheel! Download our application and test to see if it fits your needs.
- If you do have a solution, why not join the community, share your success story, learn from others and join our events. We would be happy to welcome you into our community.

## An action supported by ISA<sup>2</sup>

This action is supported by the European Commission's ISA<sup>2</sup> programme. ISA<sup>2</sup> is a EUR 131 million programme supporting the modernisation of public administrations in Europe through the development of e-Government solutions. More than 20 solutions are already available, with more to come soon. All solutions are open source and available free of charge to any interested public administration in Europe

## Problem

Does your organisation draft or edit legal texts?  
Do you struggle with structuring, formatting, sharing or processing legislation?

## Solution

We offer you a software tool based on XML for drafting or editing legal texts in a collaborative way.

## Features

### COLLABORATION

Instead of a local software to edit acts, our solution enables online collaboration. Reusable feature that can be plugged into your own user management database.

### REVIEW / COMMENTS

Each user that has access to a draft, depending on his/her role, can add comments and suggestions, search and filter comments.

### STRUCTURE

We use LegalDocumentML and though we have implemented the structure rules agreed by the European institutions so far, you can adapt it.

### IMPORT

The import feature retrieves the text in XML from the source repository like the Official Journal of the European Union and transforms it into LegalDocumentML compatible with LEOS.

### VERSIONING

All versions are centrally stored, protected by role based access control rules and can be compared.

### RICH TEXT

The current version allows the user to add pictures, tables, mathematical formulas. The add image feature is enabled only for the annexes but it can be configured to be added in other elements of a draft.
